

C&C Stretcher Carrier

The C&C Universal Stretcher Carrier (USC) is suitable for the transport of stretchers. Normally, the USC stretcher carrier is used for the transport of stretchers on rescue baskets of rescue vehicles (fire brigade lifting platforms and vehicle ladders).

For the installation of the USC on the basket of a rescue vehicle, use must be made of an adapter frame. This adapter frame must be attached to the indicated attachment points of the USC base frame, in conformity with the installation regulations stipulated in Chapter V, Paragraph 2 of this user manual.

The USC can be used in combination with various types of stretchers that are made by different manufacturers, such as Ferno Washington, Stollenwerk, Stryker, stretchers of the type 'Raam – De Mooy' and other stretchers, in conformity with DIN 13024 and 13025.

C&C USC Componenten

- | | |
|---|--|
